-

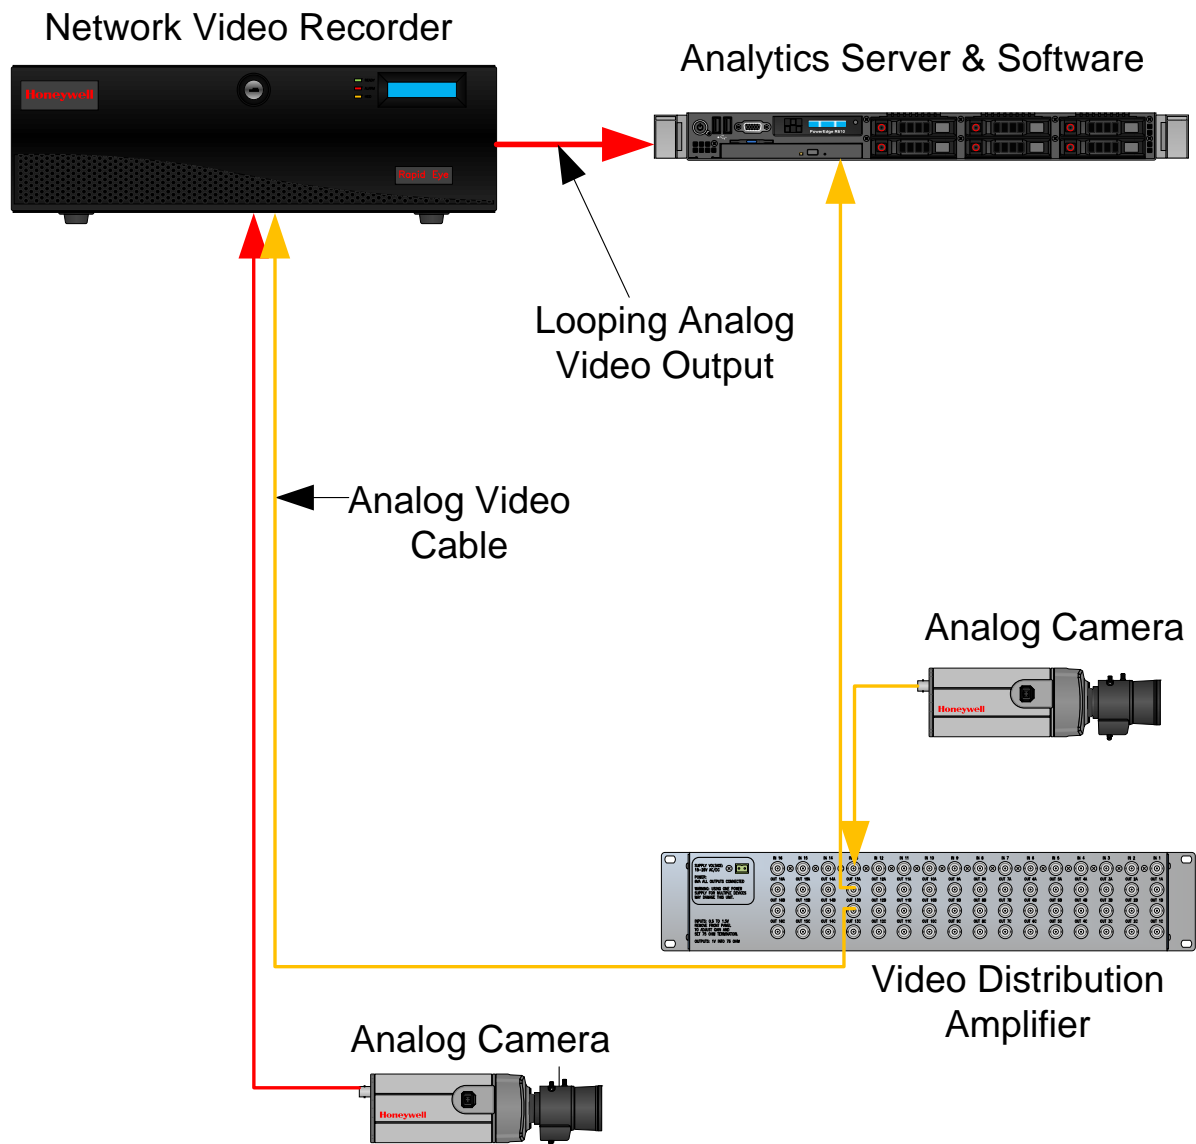

Analog Camera Support

The Honeywell Video Analytics Software supports all standard NTSC video cameras.

1. Purchase an appropriate server based upon specifications and number of cameras to be processed.
 2. Install appropriate framegrabber cards for number of cameras.
 3. Install Honeywell Video Analytics software.
 4. Connect cameras to framegrabber input connectors.
 5. Program cameras for desired detection features.
-

Note: Honeywell has two different framegrabber cards, 1) HACARDPAC for computers with PCI card interfaces, 2) HACARDPAC2 for computers with PCI-e card interfaces. Each of the cards requires a cable for connecting the cameras to the HD44 port on the card. The HACARDCAB8 is a multi-camera cable supporting 8 camera inputs. Up to 3 individual cards may be used in a single PC, based upon hardware capabilities.

Note: If the dealer or end-user wishes to provide their own framegrabber cards, the Euresys Picolo Alert Compact (PCI) or the Euresys Picolo Alert Compact PCIe cards may be used. Each of the cards requires a cable for connecting the cameras to the HD44 port on the card. The Spider Cable HD44 to BNC is a multi-camera cable supporting 16 camera inputs, but only inputs 1 to 8 are available for analytics. Up to 3 individual cards may be used in a single PC, based upon hardware capabilities.
